

Your fifteen minutes

Two copies per table, and everything here works on a phone.

From 13:18 to 13:33, work on one problem: the seed your group formed around, a member's non-confidential problem or the ready example for your track. You do not need to finish. When the tool resists you, make a note of it. That is often where human judgement matters most.

What the fifteen minutes ask

1. Use a tool on your problem and keep a tangible result: a critique, a template, a chart or a translation. Rough is fine.
2. Note one or two places where the tool was fluent but wrong. Keep the output as it appeared. Those errors show what needs checking.
3. Prepare one line for the lightning round. You have up to 45 seconds and no slides. Name the limitation you found, the checkpoint you would require before use or how your field over- or under-uses AI for this task.

If time is short, write the line for the room before anything else. A partial note with a clear observation is enough. If your group finishes early, use the app to map what the tool automated and where you steered, choose between interwoven and staged oversight, and reflect on your field.

Choose three jobs in the first minute. One person drives the tool, one guards the red lines below and one keeps the note and speaks for the group. Everyone should question the output.

Before you paste anything

If you would not pin it to a public noticeboard in the building, do not put it into a free AI tool. Free tiers may reuse what you enter for model training, and privacy settings can change without notice. Stop if any of these applies.

- Personal data about an identifiable living person, including student and participant records.
- Special-category data under the UK GDPR, such as health, ethnicity or beliefs, and children's data.
- Anything confidential, unpublished or embargoed, such as a manuscript, a grant draft or a peer review.
- Material whose rights are not yours to give away.

If any applies, choose one of four routes. Anonymise until nobody can be singled out, even by combination. Synthesise a version with the same shape and invented content. Abstract the task and leave out the sensitive specifics. Or abstain, and say why.

Your shared note

Open genai-rt.web.app in any browser. There is no account to create and nothing to install. One device makes the group with a non-identifying name, such as 'Otters', and the passcode the facilitator reads out. It then shares the group name and six-character join code with the others. Choose your track from the dropdown. The note saves as you go. Submit before the lightning round at 13:33 where possible, or during it at the latest. Sharing the note in the public archive is optional.

If the app will not load, use hackmd.io or paper under the headings in your pack, and the facilitator will transcribe the note afterwards.

A personal selection, made in the facilitator's own capacity. It is not the position of the University of Oxford (the facilitator's employer) or of the host, and it is not legal advice.
